

# Smart Farmer - IoT Enabled Smart Farming Application - SOLUTION ARCHITECTURE

**TEAM ID:** PNT2022TMID47731

**TEAM LEADER:** YUAVSRI

**TEAM MEMBERS:**

MOOFIKA BEGAM

SIVA BALA

DIVYA BHARATHI

TEMPERATURE AND HUMIDITY SENSOR

L293D (16 PIN IC )

SOIL MOISTURE SENSOR

IBM IoT CLOUD

LIGHT INTENSITY SENSOR

pH SENSOR

ARDUINO-UNO

MOBILE APP

OPEN WEATHER API

- The different soil parameters (temperature, humidity, light intensity, pH level) are sensed using different sensors and the obtained value is stored in IBMcloud.
- Arduino uno is used as a processing unit which processes the data obtained from sensors and weather data from weather API.
- Node red is used as a programming tool to wire the hardware, software and APIs. The MQTT protocol is followed for communication.
- All the collected data are provided to the user through a mobile application which was developed using MIT app inventor. The user could make decision through an app, whether to water the crop or not depending upon the sensor values.
